

## Dover's aluminum contributes to creation of game-changing, special-delivery drone.

Dover was thrilled to contribute to the ATLIS drone, the product getting all the attention at the biggest drone show in the world. Military and humanitarian organizations were especially interested due to its incredible potential uses.

### What is the Atlantis?

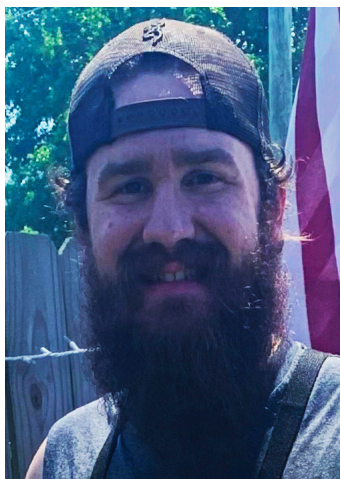

Billed as a long-range, heavy lift cargo UAV, the Atlantis can carry 500 lbs over 300 miles. It promises significant cargo handling and range, and will be available for field use in less than 24 months.

### And why does it matter?

*"We want to be in places that have limited, damaged infrastructure or unavailable infrastructure. That would be anything from 400,000 villages in Africa, to oil platforms, or even military applications where it costs \$1000/litre to deliver water into the field."* -Brian Vander Mey, Aergility's Director of Sales and Marketing

## We proudly salute Nick Lietzau, this month's Employee Spotlight

### How long have you worked at Dover?

Going on 4 years

### What do you do?

I work as a member of our Houston warehouse team pulling orders, receiving inbound material, as well as shipping logistics.

### What is your favorite part about working at Dover?

My coworkers. They are my family.

### What is one accomplishment you are most proud of?

Getting over my fear of heights with the help of my wife!

### What is your favorite movie or show and why?

Star Wars, Star Wars, Star Wars. I've loved it since I was a kid. The movies, the shows, I can always find enjoyment there.

### What do you do in your free time?

I love to get outdoors; camping, hiking, and seeing new places.

## Can hollow bar help reduce costs? Yes!

**Mechanical Tube** is used for custom machine-parts that often require modification for specific end-use applications. Because of the customizations required, Dover offers the largest breadth and depth of OD/wall combinations possible, to help customers reduce overall machining costs, scrap loss, and lead times.

**Customer story:** A regional supplier wanted to keep pace with growing demand from a major U.S conglomerate's warehouse expansion. So Dover sourced hollow bar fit for assembly-line rollers at the right cost-point and shortest lead time to keep operations flowing. As a result, the customer reduced lead time by 2 months and eliminated logistics costs by pairing tonnage with existing mill order quantities.
